Transforming Dreams! Redefining Future!

ReactJS 18.2.0 Training Overview

React (also known as React.js or ReactJS) is a free and open-source front-end JavaScript library for building user interfaces based on UI components. It is maintained by Meta (formerly Facebook) and a community of individual developers and companies.
It is used for creating dynamic and interactive user interfaces for mobile and web applications. It is highly flexible, declarative and efficient for developing scalable, simple, and fast front-end for web & mobile applications. In simple terms, React JS effectively handles the view layer of mobile and web application.

React can be used as a base in the development of single-page, mobile, or server-rendered applications with frameworks like Next.js. However, ReactJS is only concerned with state management and rendering that state to the DOM, so creating React applications usually requires the use of additional libraries for routing, as well as certain client-side functionality

React is flexible in such a way that, in any application, we can use as little or as much React as you need. For example, react can be used in any existing web application to develop a new feature or even the application's entire UI.

ReactJS has become highly popular across the globe because of its extra simplicity and flexibility. Many people are even referring to ReactJS as the future of web development.

Part of this huge popularity comes from the fact that top corporations such as Facebook, PayPal, Uber, Instagram, Airbnb etc use it to develop the user interfaces.

Objectives of the Course

This is to provide in-depth insights about ReactJS and keep updated yourself with latest ReactJS concepts and it's integrated other technologies according to updated industry standards.
⇨   The main objective of React Training is to make you as a top-class React.js Developer able to design and build modern Interactive user interface components to enhance application performance.

Who should do the Course

⇨   Anyone who is trying to learn fastest growing UI framework and one of the top 3 frameworks. It is growing fast in terms of opportunities too.
Prerequisites
⇨   HTML
⇨   JavaScript
⇨   CSS

ES6: JavaScript concepts related to ReacJS

⇨   History of JavaScript
⇨   Features
⇨   let & const with example
⇨   Arrow Functions
⇨   Alternative

React JS

ReactJS: Introduction

⇨ What is ReactJS?
⇨ Version history.
⇨ Why ReactJS?
⇨ Advantages of React JS
⇨ Internals of ReactJS.
⇨ Work flow of React JS
⇨ Scope of React JS
⇨ Software's required.
⇨ Tips and Arrow Functions
⇨ Exports and Imports
⇨ Tips for exports and imports
⇨ Classes with example
⇨ Inheritance
⇨ Spread and rest Parameter
⇨ Destructing

ReactJS: Setup – First Application

⇨ About NodeJS
⇨ Installation
⇨ Npm – managing the packages
⇨ Create First ReactJS Application
⇨ Build and Execute
⇨ About Visual Studio Code
⇨ Installation of Visual Studio Code
⇨ Managing the ReactJS
    application using Visual Studio Code

ReactJS: JSX

⇨ Overview of JSX
⇨ Jsx syntax
⇨ Difference between JS and JSX.
⇨ Jsx Parser
⇨ Comments in jsx
⇨ Introduction of Virtual DOM.
⇨ Rendering an Element into the DOM
⇨ Naming Conventions
⇨ JSX Transpilation to React Code Example
⇨ Running the Transpiled Code
⇨ What are the JavaScript
    expressions available in JSX?

ReactJS: All about Components

⇨ React Components
⇨ Creating a Functional
    Component Example
⇨ Components vs Elements
⇨ Properties
⇨ Spread Attributes (an ES6 Feature)
⇨ Expressions
⇨ Fragments
⇨ Functional Components
⇨ Example of JSX Nesting
⇨ Setting CSS Styles Using Classes
⇨ Setting CSS Styles Directly
⇨ JSX Escapes Values
⇨ Working with Lists of Items -
    Iterating through Lists
⇨ Keys in Lists
⇨ Example List with Key
⇨ State in React
⇨ Setting state
⇨ Types of State Data
⇨ State Hierarchy
⇨ Lifting State Up
⇨ Props vs. State
⇨ Immutability
⇨ Immutability – Why?
⇨ Virtual DOM and State
⇨ Updating Input fields
⇨ Passing Props to Components
⇨ Passing Functions to Components
⇨ Event Handling
⇨ Event Handler Example
⇨ Event Binding - Dos
⇨ Event Binding – Don'ts
⇨ Passing Parameters to Event Handlers
⇨ Component Life-cycle
⇨ Initial Render
⇨ Props Change
⇨ Stage Change
⇨ Component willMount
⇨ Component didMount
⇨ Component Unmount
⇨ Life-cycle in Functional Components
⇨ Applying Different
    Lifecylces in the Application.
⇨ When to choose
    Appropriate lifecycles.
⇨ Interaction in between
    components
⇨ Component Communication
    using Context

⚛ React JS

Forms and UI

- ⇨ Lists of Form components.
- ⇨ Setup Controlled and Uncontrolled form components.
- ⇨ React JS Form validations.
- ⇨ Create a React Form.
- ⇨ Client-side form validation.
- ⇨ Using Formik Library with React
- ⇨ Using YUP Library with Formik in React

Working with Rest API

- ⇨ Calling REST API
- ⇨ Sending POST request
- ⇨ CURD Operations example

React Router

- ⇨ Routing and Navigation
- ⇨ react-router
- ⇨ Creating a react-router based project
- ⇨ A Basic Routed Component
- ⇨ Router vs. BrowserRouter
- ⇨ The Route component
- ⇨ Redirect Route
- ⇨ Navigating with
- ⇨ Route Parameters
- ⇨ Retrieving Route Parameters
- ⇨ QueryString Parameters
- ⇨ Create a Single Page Application.
- ⇨ Applying Routing.
- ⇨ Dynamically render the components based on the url

State Management for React

- ⇨ React State Basics – Props and State
- ⇨ Props
- ⇨ State in Class Based Components
- ⇨ Managing State with Hooks in Functional Components
- ⇨ The Problem with Props and State
- ⇨ Redux State Library
- ⇨ Redux Advantages
- ⇨ Redux Disadvantages
- ⇨ Basic Rules for State Management
- ⇨ Types of State   ⇨ Data State
- ⇨ Communication State
- ⇨ Control State   ⇨ Session State
- ⇨ Location State
- ⇨ Location State Side Effects

Event handling in JSX

- ⇨ on Blur, onKeyUp, onChange and other useful primary events in React JS.
- ⇨ How to Sharing events between the components?
- ⇨ Communicate Data between components.
- ⇨ Applying all lists of events

Styles in ReactJS

- ⇨ CSS and inline styles in React JS overview.
- ⇨ Introduction to styled components
- ⇨ Styling the application using styled component
- ⇨ How to use Animations in the Application

Building React Apps with Redux

- ⇨ Redux
- ⇨ Redux Terminology
- ⇨ Redux Principles
- ⇨ Redux: Actions   ⇨ Redux Action Types
- ⇨ Action Creators   ⇨ Dispatching Actions
- ⇨ Data Flow Basics   ⇨ Redux Reducers
- ⇨ Pure Functions
- ⇨ Reducer Example
- ⇨ Returning Default State
- ⇨ Creating a Development Environment with create-react-app
- ⇨ Using Redux with React
- ⇨ Initializing the Store
- ⇨ Immutability
- ⇨ Benefits of Immutable State
- ⇨ Mutability of Standard types
- ⇨ Copying Objects in JavaScript
- ⇨ Copying Arrays in JavaScript
- ⇨ One Store - Multiple Reducers
- ⇨ Combining Reducers
- ⇨ Components and Redux
- ⇨ The React-Redux Package
- ⇨ Wrapping App with Provider
- ⇨ mapStateToProps
- ⇨ mapDispatchToProps
- ⇨ Using Mapped Properties & Methods
- ⇨ Wrapping Components with Connect
- ⇨ Configure Store
- ⇨ Programming Advice - MultiTab Console

⚛ React JS

Flux

⇨ What is Flux Architecture?
⇨ What are the Flux Components available?
⇨ How Flux works?
⇨ Flux and React works together.

Using React Hooks

⇨ Functional Component Shortcomings
⇨ Hooks Overview
⇨ Hook Rules
⇨ Functional Component Props
⇨ The useState Hook
⇨ The useEffect Hook
⇨ The useContext Hook
⇨ Additional Hooks
⇨ The useReducer Hook
⇨ The useMemo Hook
⇨ The useRef Hook
⇨ Creating Custom React Hooks

Unit Testing React with React Testing Library

⇨ What are the necessary
   Tools required for Unit Testing?
⇨ React Unit Testing overview
⇨ Introduction to JEST.

Server Integration & Deployment

⇨ https
⇨ httpster
⇨ npm

Code Splitting

⇨ Code splitting & Suspense
⇨ Route Based Code Splitting
⇨ Lazy Loading

Isomorphic React

⇨ Server-Side Rendering
⇨ SSR with React - Setup & Server
⇨ SSR with React - The Toolchain

New Features of React 16,17 & 18 Webpack Primer & Isomorphic React

Isomorphic React

⇨ Webpack and its use
⇨ Setting up and installing Webpack
⇨ Working with the
   configuration file of Webpack
⇨ Working with loaders
⇨ Quick word on lazy loading,
   code splitting, and tree shaking
⇨ Setting up a hot module replacement
⇨ Server-side rendering (SSR)
⇨ Working with renderToStatic
   Markup and renderToString methods

Cloud -AWS

⇨ Types of Applications
⇨ PC vs Server
⇨ Need of Cloud Infrastructure
⇨ What is Cloud Computing
⇨ What is AWS? And Why to choose AWS
⇨ How to create an account in AWS
⇨ What an Operating System and its types
⇨ Importance of Linux in Cloud Environment
⇨ How to create a Linux server in AWS
⇨ Putty vs Xshell
⇨ AWS EC2 Instance
⇨ Types of instances in AWS
⇨ AWS Tenancy
⇨ AWS Launch Template
⇨ AWS EBS volumes
⇨ Need of Elastic IP Address
⇨ AWS RDS service for JDBC Application?
⇨ How to deploy web application in AWS Elastic Bean Stalk
⇨ AWS S3 service
⇨ How to deploy spring boot application in AWS Cloud

Communication Skills
