Selenium

# Selenium Web Driver with Java

## Course Objectives

This course is designed to train freshers and professional testers with the basics of testing web applications using Selenium.

## After completing this course, you will be able to

- ⇒ You will be in a position to pick any website over the internet and can automate it
- ⇒ Implement page object design pattern, data-driven testing, and Cucumber Framework
- ⇒ Learn to use Selenium Grid with TestNG for parallel execution
- ⇒ Understand Selenium WebDriver Architecture
- ⇒ Set up WebDriver project in Eclipse and write test cases using TestNG
- ⇒ Understand how to use Maven and Jenkins
- ⇒ Running our automated test inside a Docker container
- ⇒ Execute a project from scratch by building an automation framework and automating a few test scenarios
- ⇒ Able to work on Live Projects, Manipulate, complex XPath, and CSS
- ⇒ Able to justify 1-5 years of your existing experience in Selenium

## Participants

- ⇒ Manual Testers/freshers
- ⇒ Testers with no java programming experience looking to gain WebDriver experience.

## Automation Basics

- ⇒ Fundamentals of Test Automation
- ⇒ What are the advantages of automation testing?

## Introduction to Selenium

- ⇒ What Selenium is and how it is used in Real-time
- ⇒ Features of Selenium

## Selenium IDE

- ⇒ Installing IDE
- ⇒ Building Test Scripts
- ⇒ Running Test Scripts
- ⇒ Locating Elements on the web page
- ⇒ Limitations of Selenium IDE

## Web Driver Basics

- ⇒ Selenium Web Driver Overview
- ⇒ Configuring WebDriver in Eclipse
- ⇒ WebDriver Architecture
- ⇒ Web Driver Drivers
- ⇒ WebDriverManager
- ⇒ Traditional Locators
- ⇒ Relative Locators
- ⇒ Handling Web elements
- ⇒ Running tests in multiple browsers
- ⇒ Wait Strategies
- ⇒ Handling AJAX controls
- ⇒ Handling JavaScript alerts, prompts, and confirmations

## WebDriver Intermediate

- ⇒ Handling Multiple frames
- ⇒ Handling Multiple windows
- ⇒ Capturing screenshots
- ⇒ Browser navigation
- ⇒ Handling Keyboard and Mouse Events
- ⇒ Handling Autosuggestions
- ⇒ Handling Web Tables
- ⇒ Finding Broken Links
- ⇒ File upload and Download using Robot class

## TestNG

- ⇒ How to Install the TestNG plug-in in Eclipse
- ⇒ Various Annotations
- ⇒ Assertions
- ⇒ Writing Selenium test script from scratch
- ⇒ Reports using TestNG

## Project Details

### Application Overview

- ⇒ Bank project overview
- ⇒ Project Description
- ⇒ Tools used in the project  
(Jenkins, Maven, GitHub, Docker, and Robot Class)
- ⇒ Roles and Responsibilities

### Automation process

- ⇒ Automation life cycle
- ⇒ Identify test cases that are to be automated
- ⇒ Authoring the scripts
- ⇒ Executing the scripts
- ⇒ Analyze the Reports

## WebDriver - Framework

- ⇒ Introduction to Various Frameworks
- ⇒ Data-Driven Tests Using POI
- ⇒ Reading, Writing data into Excel
- ⇒ Database Connection (JDBC)
- ⇒ Reading, Writing data into MySQL
- ⇒ Page Object Model Framework (POM)
- ⇒ Writing scripts Using Page Object Model

## TestNG Framework

- ⇒ Configuring Test Suites
- ⇒ Passing Parameters to Tests
- ⇒ Parallel Test Execution Capability
- ⇒ Re-run failed test scripts
- ⇒ Attributes of @Test
- ⇒ Running TestNG suites from the command prompt

## Build Automation Tool (Maven)

- ⇒ Creating a Maven project
- ⇒ Understanding of POM .xml
- ⇒ Maven Integration with TestNG
- ⇒ Executing Scripts using the Maven build tool

## Cucumber Framework

- ⇒ Overview of BDD, TDD
- ⇒ Cucumber Project Setup
- ⇒ Gherkin Keywords
- ⇒ Working with a simple scenario
- ⇒ Cucumber options
- ⇒ Generating Cucumber Reports
- Cucumber Advanced Features**
- ⇒ Working with Data table
- ⇒ Page Object Model in Cucumber
- ⇒ Background and Hooks examples in Cucumber

## Continuous Integration Tool (Jenkins)

- ⇒ Configuring Jenkins
- ⇒ Executing the windows  
commands in the Jenkins Free Style project
- ⇒ Creating Maven Job
- ⇒ Manage Plug-ins
- ⇒ Scheduling the Jobs

## GitHub

- ⇒ What is Version Control System
- ⇒ What is GitHub
- ⇒ Git commands
- ⇒ Pushing our Project into GitHub
- ⇒ Git vs. GitHub

## Selenium GRID

- ⇒ What is Selenium Grid?
- ⇒ Setting up Grid – Hub, and Nodes?
- ⇒ Running Test Scripts on Selenium Grid

## Docker

- ⇒ Docker Basics & Installation
- ⇒ Integrate Selenium Grid with Docker
- ⇒ Running our automated tests  
inside a Docker container

## API Testing

- ⇒ What is API testing
- ⇒ Advantages of API testing
- ⇒ The Types of API Testing
- ⇒ API testing tools – Swagger UI and Postman
- ⇒ API Testing Terminology
- ⇒ SOAP vs REST
- ⇒ HTTP Response codes

## API Automation – REST-assured

- ⇒ What is Rest Assured?
- ⇒ Configure in Eclipse
- ⇒ Validate Response Status and Body
- ⇒ Basic Authentication

## Interview Questions and Sample Resumes

## Basics of Java

- ⇒ What is Java?
- ⇒ Variable and Data type in Java
- ⇒ Operators in java
- ⇒ Control statements
- ⇒ Strings and Arrays

## OOPs Concepts

- ⇒ Advantage of OOPs
- ⇒ Classes and objects – concepts of classes, objects, Methods
- ⇒ Constructors
- ⇒ Package      ⇒ This keyword
- ⇒ Static keyword
- ⇒ Overloading methods and constructors
- ⇒ Inheritance, Benefits of inheritance
- ⇒ Types of Inheritance
- ⇒ Method overriding, super uses
- ⇒ Polymorphism
- ⇒ Encapsulation
- ⇒ Abstract class
- ⇒ Interface      ⇒ Final Keyword
- ⇒ Access Modifiers

## 3.Exception Handling

- ⇒ Exception
- ⇒ Types of Exception
- ⇒ Use of try-catch block in Exception handling
- ⇒ Multiple catch block
- ⇒ finally block
- ⇒ throw keyword
- ⇒ throws keyword

## 4.Java Collection Framework

- ⇒ Hierarchy of Collection Framework
- ⇒ ArrayList class
- ⇒ LinkedList class
- ⇒ List Interface
- ⇒ HashSet class
- ⇒ HashMap and Hashtable class

## 5.New Java Features

- ⇒ Lambda Expression
- ⇒ Method References
- ⇒ Functional interfaces
- ⇒ Streams
- ⇒ Stream filter

## STUDENT TRANSFORMATION STAGES

## OUR STUDENTS ARE PLACED IN
